Tolerance on Length										±0.010								

Description	A solid, headless pin of fixed diameter and length, with crowned ends and longitudinal channels rolled or pressed into the body causing displacement of the pin material.
Applications/Advantages	For temporary fastenings achieved by inserting the pin into a specifically sized hole, causing the pin stock to compress and become constrained against the hole wall. Can be preferable to a threaded fastener because hole need only be drilled, not tapped.
Material	Low Carbon Steel: AISI 1006-1018; Alloy Steel: AISI 4037, 4130, 8630; Stainless Steel: 18-8 Stainless
Shear Load	Groove pins shall be capable of withstanding minimum double shear loads as listed in the above table.
Plating	See Appendix-A for plating information.
