

WIN AdvantageSM Inventory Management Systems

Barcode Scan

The 'When It's Needed' (**WIN**) process begins with a physical requisition scan(s) of products found to be at (or below) minimum established stocking values. Generally based on Min./Max. methodologies or '2 Bin' Kanban type replenishment system.

Transmit Order

Electronic transmission of suggested order confirmation automatically sent to designated Customer Liaison for **AUDIT POINT** review and approval.

Audit Point

Audit Points are built into several stages of the VMI Replenishment process. These points provide the customer with as much, or as little auditing of the process as they deem necessary. Audit Points can be turned on or off at the customer request and at any time during the VMI on-going relationship.

Packaging

Pre-Packed, labeled and lot traceable product processed electronically and paperless, guided by Lubker designed internal '**BOLT ON**' proprietary distribution processing software.

Delivery

Product delivery made by trained Lubker technicians. All **WIN** Advantage deliveries are made in returnable transportation totes, no corrugated used or left on premises following point of use delivery. Packing Slip **AUDIT POINT** provided.

Bin Fill

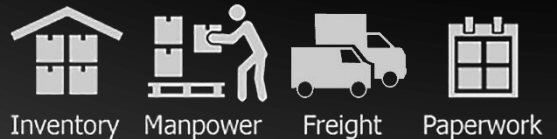

Whether a single rack of bins, or thousands of bins located throughout the largest manufacturing facilities, Lubker professional technicians deliver every part to its designated 'home'. Replenishment requisition follows to complete the cycle.

Invoice

Invoice options include 'one per order' or 'consolidated' based on agreed statement issue schedule. All invoices match specifically to the delivered Packing Slip. All have **AUDIT POINT** data characteristics.
